software engineer

“I don’t even need to Google this”
—Me before I spent two hours Googling

./about-me

I’m about as “Gen Z” as they come... As a teenager, I launched (and crashed) online businesses left-and-right. But from the ashes of those drop-shipping websites and stock trading bots, emerged my first technical skills. I couldn’t believe it, I felt so enabled! I fell in love with learning and tinkering. I’m blown away at what I’ve learned in the years since then, as I’m sure I will be by the years that come next.

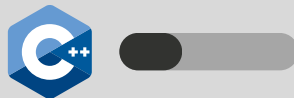

./skills

Backend development

Big data processing

Computer vision

./languages

./projects

Enginuity

A job aggregator that allows users to search via resume (embedding-based search), partnered with an engineering community with 285k+ total followers.

The Daily Byte

A multimodal news website that uses an LLM to curate and rework stories.

CU Web Development Club

Alongside my professor, I founded a 26 member club that met weekly, contracted for web dev clients, and built friendships.
